

How to install

Smart lock

Rather see it in 3D and hear each step?

Point your phone camera at the code. The manual opens on your phone, shows each step in 3D and reads it aloud.

1

Measure the door

Measure the door thickness and the distance from the edge to the center of the handle. Check that both fit the template in the box.

Scan to hear this step

2

Remove the old lock

Undo the screws on the inside. Pull off both handles, then the latch from the edge of the door.

Scan to hear this step

3

Fit the new latch

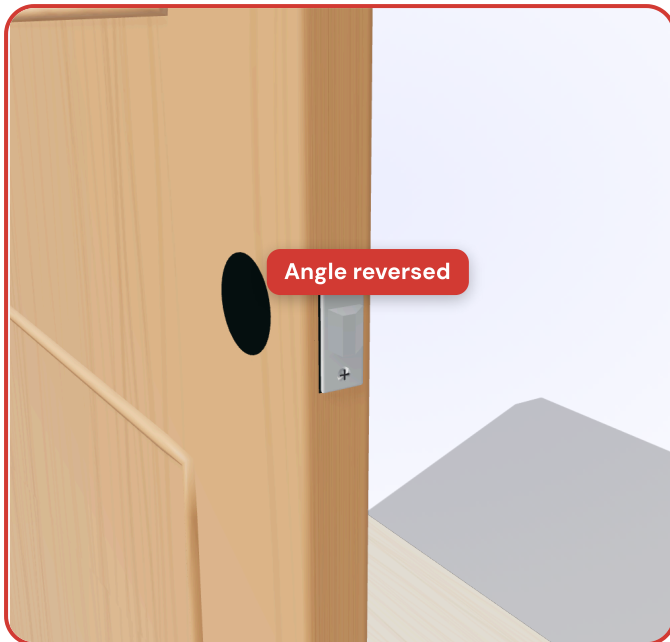

Slide the new latch into the edge of the door and screw it in. The angled side faces the way the door closes.

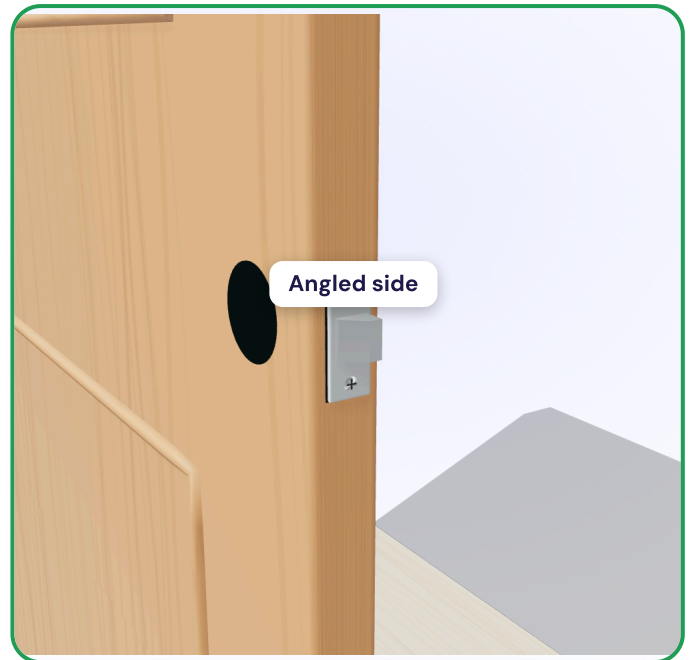

Scan to hear this step

Not like this: a latch turned the wrong way stops the door from closing on its own.

Like this

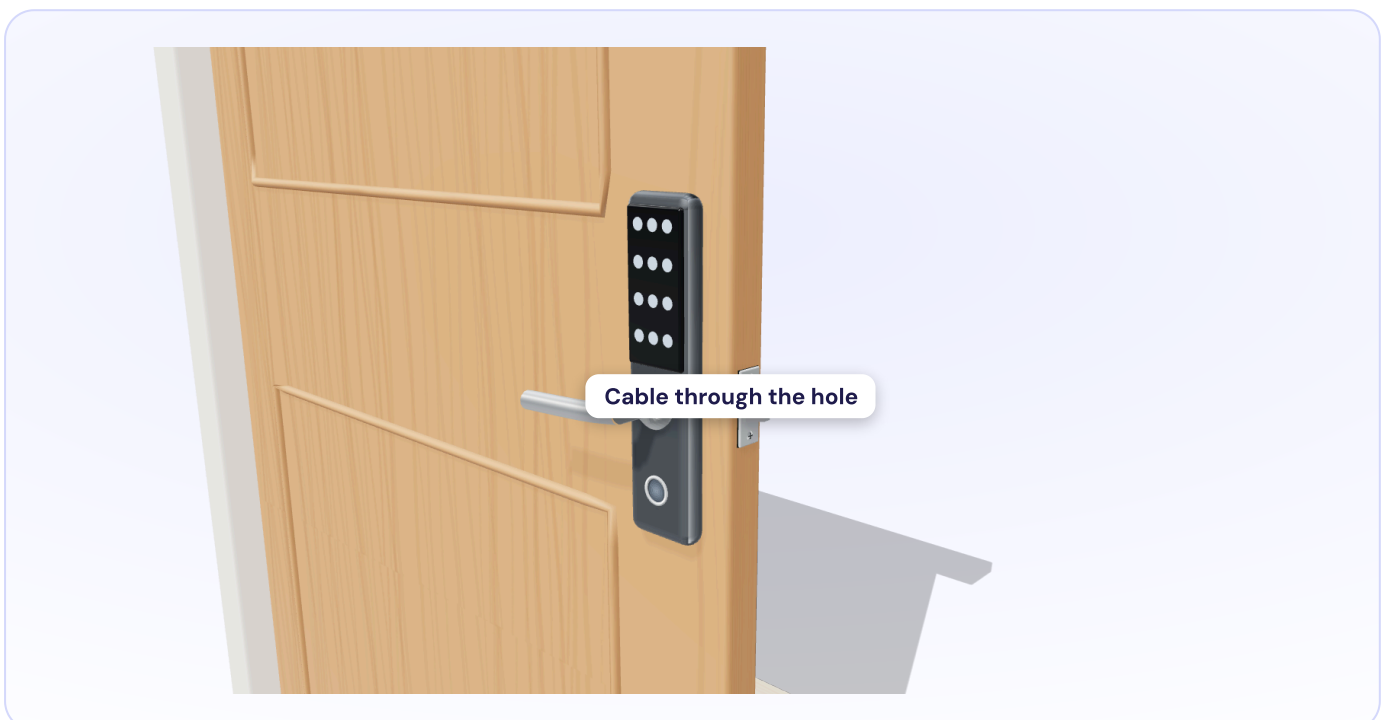

4

Fit the outside unit

Place the keypad unit on the outside of the door. Feed its cable through the hole.

Scan to hear this step

5

Fit the inside unit

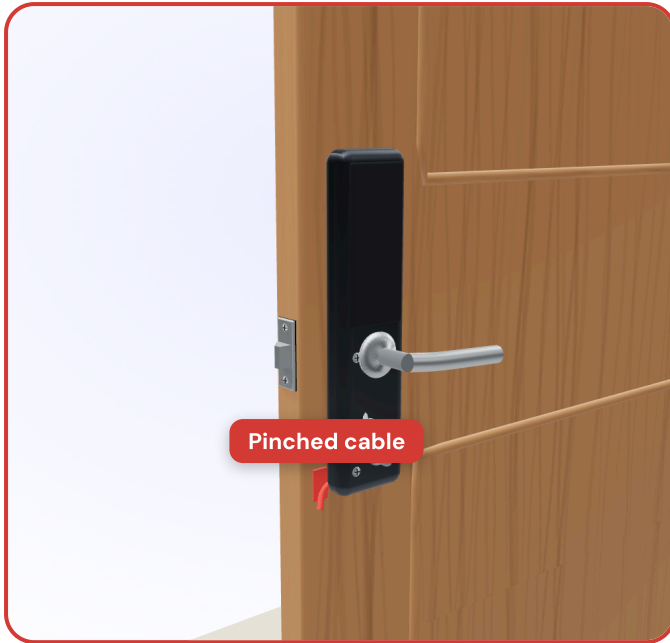

Plug the cable into the inside unit without folding it. Press the unit to the door and tighten the screws.

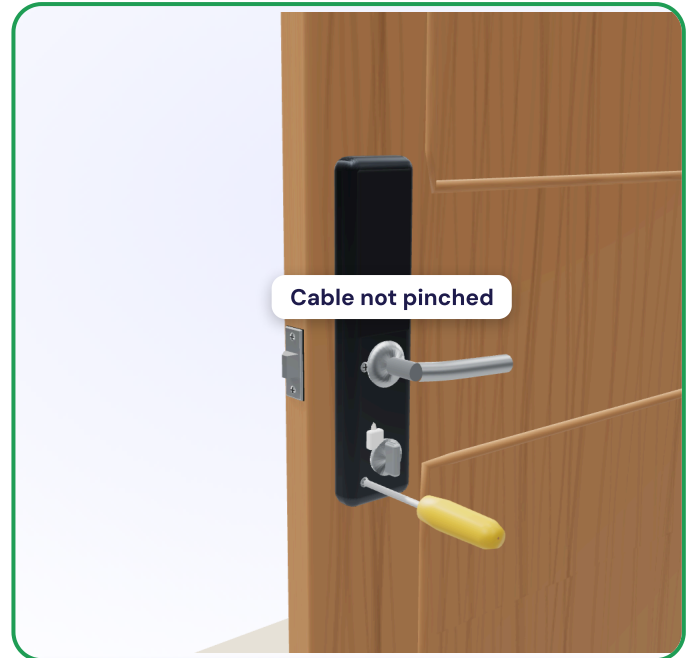

Scan to hear this step

Not like this: a cable pinched between the lock and the door cuts power to the keypad.

6

Put in the batteries

Take off the inside cover and put in the 4 AA batteries. Check the + and - side of each one.

Scan to hear this step

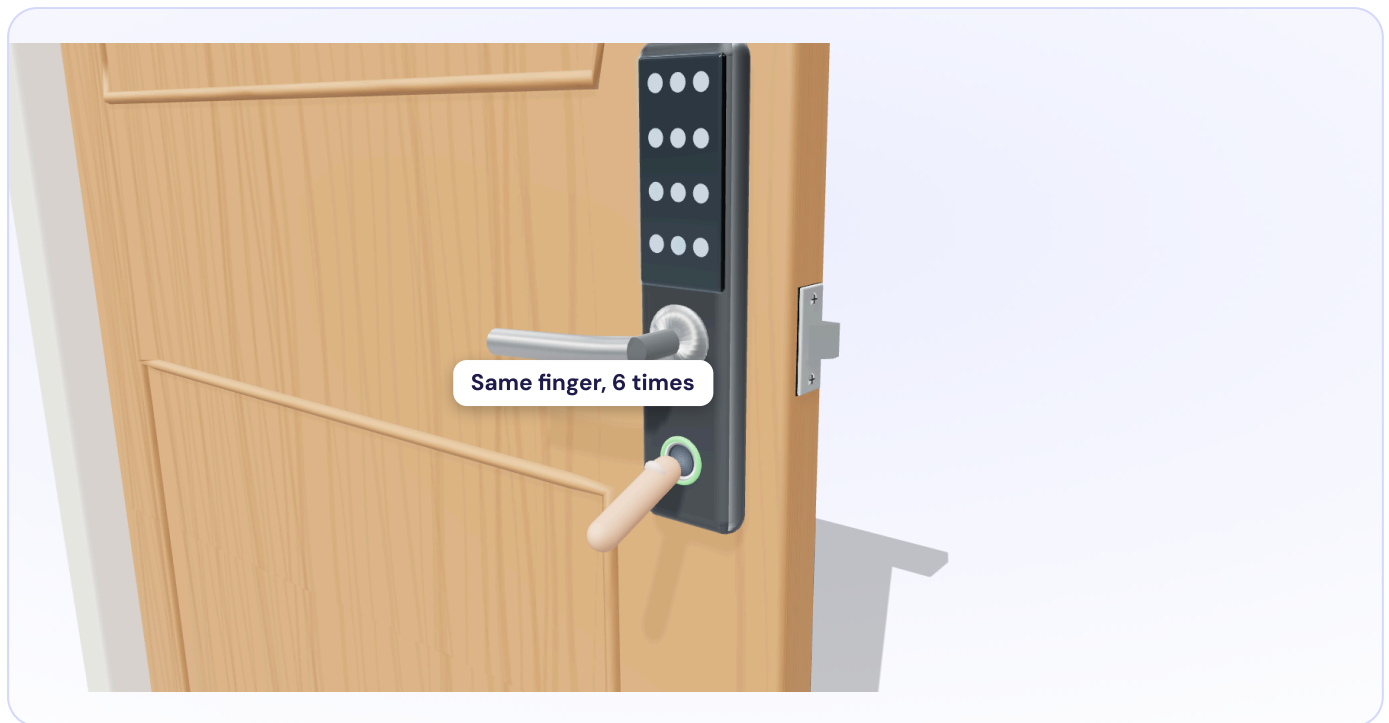

7 Add your fingerprint

Start enrollment from the app or the keypad. Touch the sensor with the same finger 6 times, moving it slightly each time.

Scan to hear this step

8 Test with the door open

Before closing the door, lock and unlock it several times with your fingerprint and your code. Only then close the door.
